Rejlers signs framework agreement with Mer Sweden regarding charging infrastructure

Rejlers has entered into a framework agreement with Mer Sweden that includes inspection services and will ensure quality and safety in the expansion of Mer's charging infrastructure for electric vehicles.

Mer Sweden is part of the European charging group Mer, which is owned by Statkraft – Europe's largest producer of renewable energy. The company is growing rapidly to meet the increasing demand for sustainable transport solutions and offers complete charging solutions to property owners, companies with large vehicle fleets, depots and heavy traffic, as well as through its public charging network.

Through the agreement, Rejlers will become a strategic partner with responsibility for technical inspections and quality control of Mer Sweden's new charging stations. The framework agreement runs for one year with the possibility of extension and gives Mer Sweden safe and flexible access to qualified inspection services – an important prerequisite for an efficient and reliable expansion of the charging infrastructure.

“We are proud to be able to contribute to the electrification of the transport sector by quality assuring the expansion of Sweden's charging infrastructure. With our long experience of technical review and quality assurance, we ensure that Mer Sweden's installations meet high demands on both functionality and safety. It strengthens our position as a leading player in inspection services for sustainable infrastructure”, says Daniel Håkansson, Project Manager at Rejlers.
