

AlzeCure Pharma to present at Redeye Neurology Day on October 15

AlzeCure Pharma AB (publ) (FN STO: ALZCUR), which develops small-molecule drug candidates for CNS diseases with a focus on Alzheimer's disease and pain, today announced that the company will participate at Redeye Neurology Day on October 15, where CEO Martin Jönsson will present the company's development projects in neurology and provide an update on the recently signed agreements with Eli Lilly and QuantumCell.

Neurology Day is Redeye's annual event on drug development in neurology and brain diseases, areas with significant medical needs and where AlzeCure has several drug candidates in development. During 2026, the company has outlicensed two Alzheimer's projects: ACD680 from the Alzstatin platform to Eli Lilly, and ACD856 from the NeuroRestore platform to Denmark-based QuantumCell. In the presentation, Martin Jönsson will discuss the next steps in the partnerships and the company's remaining portfolio, including the Painless pain platform.

Presentation time: 11:15 CEST, October 15, 2026

Venue: Redeye, Mäster Samuelsgatan 42, Stockholm, Sweden

Watch the livestream via:

About AlzeCure Pharma AB (publ)

AlzeCure® is a Swedish biotech company developing new, innovative drug therapies for severe diseases and conditions affecting the central nervous system, such as Alzheimer's disease and pain – indications where available treatment options today are very limited. The company is listed on Nasdaq First North Premier Growth Market and is developing several drug candidates in parallel based on three research platforms: NeuroRestore®, Alzstatin® and Painless. AlzeCure has recently signed collaboration and outlicensing agreements with Eli Lilly on the Alzstatin platform, and with QuantumCell ApS on the NeuroRestore platform.

FNCA Sweden AB is the company's Certified Adviser. For more information, visit www.alzecurepharma.com
