Inside Information: Bittium Wireless Ltd, a Subsidiary of Bittium Corporation, Received a Purchase Order from the Finnish Defence Forces for Bittium TAC WIN™ and Bittium Tough Comnode™ Products

Bittium Corporation stock exchange release on June 10, 2025, at 4:15 pm (CEST+1)

Bittium Wireless Ltd, a subsidiary of Bittium Corporation, has received a purchase order from the Finnish Defence Forces for the software-defined radio-based Bittium Tactical Wireless IP Network™ (TAC WIN) system's products and Bittium Tough Comnode™ communication devices and related accessories. The products will be used by all troops of the Finnish Defence Forces to support the combat doctrine where mobility, leading the troops on the move, and effective communications play a key role.

The purchase order has been issued under the Partnership Agreement between Bittium and the Finnish Defence Forces. The Partnership Agreement applies to the years 2025–2036 and establishes a framework for purchasing Bittium's products, software, and services. The purchases are planned together with the Finnish Defence Forces for each year. The Finnish Defence Forces will issue separate purchase orders for the products and services in several batches according to what has been agreed in the Partnership Agreement.

The value of the purchase order received now is approximately EUR 7.9 million. The ordered products will be delivered during the years 2025 and 2026.

In Oulu, Finland, on 10 June 2025,

Petri Toljamo
CEO
Bittium Corporation

Bittium

Bittium specializes in the development of reliable, secure communications and connectivity solutions leveraging its 40-year legacy of expertise in advanced radio communication technologies. Bittium provides innovative products and services, customized solutions based on its product platforms and R&D services. Complementing its communications and connectivity solutions, Bittium offers proven information security solutions for mobile devices and portable computers. Bittium also provides healthcare technology products and services for biosignal measuring in the areas of cardiology and neurophysiology. Net sales in 2024 were EUR 85.2 million and operating profit was EUR 8.6 million. Bittium is listed on Nasdaq Helsinki. www.bittium.com

Bittium Tactical Wireless IP Network™

Bittium Tactical Wireless IP Network (TAC WIN) is a software-defined radio (SDR) based wireless broadband network system intended for military and public safety use. With the system, MANET (mobile ad hoc network), link, and connection networks can be formed into one logical IP network quickly, no matter what the location is. Bittium TAC WIN is compatible with existing fixed and wireless network infrastructures. The core of the system is a tactical router that enables users to freely form both wired and wireless broadband data transfer IP connections. The tactical router also enables connections to different types of terminals and other communication systems in order to connect them into a single communication network. In addition to the router, the system comprises three types of radio heads, and each radio head covers its own frequency band area and can be used for flexible formation of optimized network topologies for different communication needs. All the products of the system are designed for harsh conditions, and thanks to the system's automated functions, the implementation of the system can be done quickly. Due to the software-based functionality of the Bittium TAC WIN system, it can be easily updated with additional performance, which allows it to be developed and maintained cost-efficiently throughout the whole lifespan of the system.

Bittium Tough Comnode™

The versatile Bittium Tough Comnode fulfills the data transfer needs of the mobile troops by functioning for example as a VoIP phone, an IP router, and an SHDSL repeater. Bittium Tough Comnode is rugged and easy to install in different environments and it is also portable by soldiers on the battlefield. The device is compatible with the software defined radio based Bittium Tactical Wireless IP Network™ (TAC WIN) system and Bittium Tough SDR™ radios, which are meant for broadband tactical communications. The Tough Comnode device offers diverse connectivity options also to third-party equipment and systems. Bittium Tough Comnode also enables using legacy Combat Net Radios (CNR) as part of the IP-based tactical communication system (Radio over IP, RoIP).
