

Nasdaq's new OMXC25 Index - Here's what you need to know

1. Why are you introducing a new bigger index?

The Danish equity market is the fastest growing market in the Nordics, both in terms of listed market capitalization and listed equity turnover. As a result of the big number of large cap listings since 2010, the Danish stock market has nearly doubled in market capitalization and equity turnover since 2012. With five additional constituents in the index, the basic pledge of visibility to listed companies will be strengthened and we will have a better-suited indicator for the Danish equity market.

2. When will the new index replace the current OMXC20?

In December 2017 Nasdaq will launch the new index OMXC25 which will replace the OMXC20 index as the Danish Blue Chip index.

3. New C25 Index Future to match the changing market.

In June 2017 we will introduce futures and options on OMXC25. Open positions in existing OMXC20 CAP futures and options are expected to be transitioned into OMXC25 futures and options by December 2017.

The OMXC25 index will continue to run in parallel with the OMXC20 throughout this year before becoming the new leading index for the Danish equity market at the December 2017 index review. After the switch, instead of 20 shares indicating the direction for the Danish equity market, the new index will cover 25 of the largest and most traded shares.

4. Which are the new constituents?

BAVA	Bavarian Nordic A/S	GN	GN Store Nord	NZYM B	Novozymes B
