## CardLab extends Access product family with Access FIDO – a Multi-Function Smart Card powered by FPC Biometric Technology for Seamless Logical and Physical Access

**Herlev, Denmark & Gothenburg, Sweden – March 5, 2026** – CardLab Innovation ApS today announced the launch of Access FIDO, its latest multi-functional authentication card designed to simplify and secure enterprise access across physical and digital environments. The new card integrates a high-performance fingerprint solution from FPC, a global leader in biometric technology, delivering fast, reliable, and password-free authentication for users.

Certified to FIDO2 standards, Access FIDO enables enterprises to combine physical and logical access in one device – from secure building entry and desktop login to VPN authentication and closed-loop payments. By replacing passwords with fingerprint authentication, the card helps organizations strengthen security, reduce credential theft, and meet regulatory standards such as GDPR, AML, KYC, and eIDAS.

Access FIDO supports NFC and Bluetooth Low Energy (BLE) connectivity, ensuring seamless integration with existing IT infrastructure. It is rechargeable via contact or wireless charging, providing long-term usability and cost efficiency for large-scale enterprise deployment.

“Access FIDO represents a major step forward in enterprise authentication, bringing together convenience, security, and cost-effectiveness in a single solution,” said **Frank Sandeløv, CEO of CardLab Innovation ApS**. “With the trusted fingerprint technology from FPC at its core, Access FIDO allows organizations to modernize their access and IT systems with minimal integration effort while providing employees with a frictionless and secure experience.”

**Adam Philpott, CEO of FPC, comments:**

“CardLab’s continued selection of FPC solutions for its expanding portfolio of multi-function smart cards underscores both the strength of our partnership and the growing importance of biometrics in modern identity solutions. As smart cards evolve to combine physical access, logical access, and secure authentication in a single credential, biometric integration becomes essential to delivering true security and convenience. Access FIDO demonstrates how fingerprint authentication elevates enterprise security, enabling faster, safer, and more intuitive access to systems and facilities. CardLab’s innovation highlights how FPC technology helps organizations deploy strong, scalable authentication while enhancing the overall user experience across multiple domains.”

With applications across corporate offices, government facilities, educational institutions, healthcare environments, and critical infrastructure, Access FIDO enables secure authentication wherever trust and convenience are paramount.

### **About FPC**

Fingerprint Cards AB (FPC) is a global biometrics leader, offering intelligent edge to cloud biometrics. We envision a secure, seamless world where you are the key to everything. Our solutions – trusted by enterprises, fintechs, and OEMs – power hundreds of millions of products, enabling billions of secure, convenient authentications daily across devices, cards, and digital platforms. From consumer electronics to cybersecurity and enterprise, our cloud-based identity management platforms support multiple biometric modalities, including fingerprints, iris, facial, and more. With improved security and user experience, we are driving the world to passwordless. Discover more at our [website](#) and follow us on [LinkedIn](#) and [X](#) for the latest updates. FPC is listed on Nasdaq Stockholm (FING B).

### **About CardLab**

CardLab is a leading provider of advanced biometric smart card solutions and tokenized identity platforms, specializing in secure authentication for physical and logical access with passwordless solutions. With its headquarters and R&D in Denmark and manufacturing facilities in Thailand, CardLab develops high-performance, user-friendly biometric smart card products that integrate cutting-edge biometric and encryption technologies, as well as highly secure backend authentication systems for identity token verification. CardLab solutions are designed to meet the evolving security needs of enterprises, governments, and financial institutions worldwide.
