## II. MANAGEMENT REPORT

### 2.1. Overall results

The Group improved their operating results in the first nine months of the year.

The sales revenue during the first nine months of 2022 was EUR 57.71 million, an increase of 5% compared to EUR 54.90 million in the same period last year.

In the first nine months of 2022, the Group's gross profit was EUR 13.14 million, representing an increase of 673% compared to the previous year (EUR 1.70 million). The Group's net loss from EUR 10.43 million fixed in the three quarters of 2021, decreased to EUR 0.62 million in three quarters of 2022.

The Group's EBITDA for the first nine months of 2022 increased by 208% to EUR 16.78 million compared to EUR 5.45 million in the same period of 2021.

Main financial results, EUR million	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %

### 2.2. Crop growing segment overview

Results of crop growing segment consist of crop harvest fair value, sales of the previous and current year harvest and agricultural subsidies.

#### Harvest in the season of 2021/2022

The total cultivated land area by the Group amounted to 38.5 thousand hectares (ha) in the 2021/2022 season and is slightly less than the cultivated area in the 2020/2021 season. In the 2021/2022 season, 30.1 thousand ha is seeded with crops (30.9 thousand in the 2020/2021 season) out of which 11.7 thousand ha is dedicated to wheat, 6.8 thousand ha to legumes and 11.6 thousand ha to other cash crops. The majority – 10.1 thousand ha out of total 11.7 thousand ha – of wheat will be winter wheat as winter crops usually have higher yield potential compared to summer alternatives. Forage crops comprise 7.7 thousand ha in the 2021/2022 season compared to 6.8 thousand ha in the 2020/2021 season.

At the end of each quarter the Group evaluates the fair value of crops which have not yet been harvested. The Group estimated the total fair value of crops as of 30 September 2022 using following formula and assumptions:

Fair value of the crop = Costs incurred + (Cultivated area in ha \* forecasted average yield as tonnes per ha \* forecasted price per tonne – cultivated area in ha \* forecasted total cost per ha) \* T \* (1 - x), where:

- Cost incurred is cost actually incurred for a particular crop during the 2021/2022 season.
- Cultivated area in ha is the area of a particular crop seeded and expected to be harvested.

- Forecasted average yield in tonnes per ha is the expected yield for a particular crop based on the most relevant information about the crops and updated according to the most recent data.
- Forecasted price per tonne. The fair value calculations relied on the negotiated, future prices of crops after taking into account the contracts already signed with regards to the sale of the 2021/2022 harvest.
- Forecasted total cost per ha. Actual costs incurred during the 2020/2021 season which are adjusted by 21% upwards due to the growth of the main cost components.
- T is the portion of time that has already passed from sowing date until the forecasted harvest date expressed as a percentage. As of 30 September 2022, the average completion percentage estimated for this year's harvest crops was around 98% while the average completion percentage of next year crops was around 13%.
- X is an adjustment parameter for possible unexpected negative effects to the harvest. 10% was used in fair value estimations as of 30 June 2022. Crops of the following harvest were adjusted by 30%.

The formula discussed above will be used to estimate fair value of cash crops (winter and summer crops) for coming quarters as well until the actual harvest will be completed. Forecasted parameters used in the fair value estimation will be re-evaluated quarterly and adjusted by taking into consideration the most recent data.

It should be noted that the fair value of forage crop even at its point of harvest is measured at production cost incurred on forage crop. In other words, forage crop production cost is used as a measure of the fair value of that forage crop since there is no active market for forage crops and there is no reliable data to calculate market price of the forage crops. Due to this the net result on revaluation of forage crops is equal to zero.

As of 30 September 2022 the Group has completed harvesting most of the cultures. Harvest of soya, buckwheat, hemp and other vegetables will be completed in October.

Tables below present actual information on fully harvested cultures group by 30 September – wheat and legumes. Since the harvesting of other cash crops is not fully completed at the reporting date, actual information on other cash crops will be provided in the next quarter.

Table below provides harvested land plot of wheat and legumes in the current and past two seasons. Land plot of wheat and legumes remained stable in the season of 2021/2022 compared to previous period and constituted 61% of all cash crops land plot compared to 60% in the previous season.

Harvested land plot by culture group, HA	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %
Wheat	11,693	10,440	11,896	+12%	-12%
Legumes	6,785	8,056	9,035	-16%	-11%

Comparison of wheat and legumes average cost per hectare of land is provided in the table below.

Cost per 1 ha cultivated land, EUR/ha	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %
Wheat	991	762	824	+30%	-8%
Legumes	830	829	839	0%	-1%

Cost of legumes remained at the similar level in the season of 2021/2022 compared to previous season, while the average cost of wheat has increased by 30%. Cost of legumes remained at the same level as in previous year as some costs increased while others decreased – cleaning and drying costs have decreased while seed, land tillage and land rent costs have increased. Cost of wheat has increased in 2022 due to increased land tillage and land rent costs.

Table below depicts wheat and legume yields in the current and past two seasons. Wheat yield in 2022 was 3.41 t/ha which is 4% higher than wheat yield in the equivalent period last year. Legumes yield in 2022 increased by 111% compared to previous year from 1.10 t/ha to 2.32 t/ha. Yield of legumes differs significantly over last year due to the heatwave which occurred last summer and caused the decrease of yields. This year the yield of legumes was restored due to favourable weather conditions. However, these conditions were not as favorable to wheat due to the storms with strong winds that occurred in July and flattened part of wheat fields. Nevertheless, the achieved yield of wheat is only slightly better when compared to the 2020/2021 due to the poor yield of summer wheat.

Average yield, t/ha	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %
Wheat	3.41	3.29	4.13	+4%	-20%
Legumes	2.32	1.10	2.73	+111%	-60%

**CONSOLIDATED INTERIM REPORT AND CONSOLIDATED INTERIM FINANCIAL STATEMENTS**  
**FOR 9-MONTH PERIOD ENDING 30 SEPTEMBER 2022**

(All amounts are in EUR thousand, unless stated otherwise)

The Group has anticipated a higher yield this year. As can be seen from the table below, actual wheat yield was lower by 24%, while legumes yield was lower by 20% compared to expected yield at the beginning of the harvesting.

Average yield in the season of 2021/2022, t/ha	Forecasted result for the season of 2021/2022	Actual result for the season of 2021/2022	Variance, %
Wheat	4.14	3.41	-24%
Legumes	2.90	2.32	-20%

**Wheat yield in Lithuania, t/ha**  
 NOTE: The data of LT organic farms for 2022 has not yet been published, the data of conventional farms in the LT is preliminary.  
 Reference: Lithuanian Statistics Department, data of the survey of the activities of Lithuanian agricultural producers included in the Farm Accountancy Data Network (FADN), the Group's data.

**Legumes yield in Lithuania, t/ha**

According to preliminary data, most of the cash crops yields in 2022 will be higher than in previous year. Final yields of all cash crops will be provided in the next quarter.

Table below depicts comparison of wheat and legumes prices at which the harvest was evaluated (at fair value) in the seasons of 2021/2022, 2020/2021 or 2019/2020. It should be noted that at the time of the publication of the financial statements for the three quarters of 2022, significant part of the 2021/2022 season harvest has already been sold or contracted at fixed prices, therefore fair value of the crops was estimated based on average contract prices.

Average price of 1 tonne of crop, eliminating sales costs, EUR/t	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %
Wheat	402	240	208	+68%	+15%
Legumes	576	347	354	+66%	-2%

As can be seen from the data above, the price of 1 tonne of wheat in the season of 2021/2022 increased by 68% compared to previous season. The main causes of the increase are growing prices of raw materials, rising energy costs and uncertainty caused by the geopolitical situation in Ukraine.

Table below provide information on gain (loss) per hectare for wheat and legumes.

Gain (loss) on revaluation of agricultural produce at point of harvest, EUR/ha	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %
Wheat	380	28	29	+1257%	-4%
Legumes	506	(448)	130	n/a	n/a

Average gain per 1 hectare from wheat has increased significantly in the season of 2021/2022 compared to the previous season which resulted in losses due to the heatwaves. On the other hand, the weather conditions this year were favourable and allowed the Group to improve its harvest. Increase in costs was compensated with growing prices. The result of legumes was also significantly lower last season when compared to this year. The main causes were bigger yields which more than doubled when compared to last season.

As assessed at 30 September of 2022, the crop harvest will be better than last year. Higher product prices offset the increase in production cost and this is the major factor impacting results. Nevertheless, the Group will only be able to assess the final result of the crop segment for 2022 after the end of the third quarter. As of 30 September 2022, the Group recognized a EUR 8.20 million gain on revaluation of biological assets at fair value. It should be noted that as of 31 December 2021 Group recognised gain of EUR 2.33 million on revaluation of biological assets at fair value for the 2021/2022 season's crops. Thus, gain on revaluation of biological assets at fair value accounted for in the first half of 2022 amounts to EUR 5.86 million.

Crops value, EUR million	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %

#### *Crop growing segment sales results*

Total revenue generated from sales in the crop growing segment amounted to EUR 18.71 million in 2022, which marks an increase of EUR 0.30 million in revenue compared to 2021.

Crop growing segment results, EUR million	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %
Sales revenue	18.71	18.41	26,21	+2%	-30%
Cost of sales	(17.73)	(20.13)	(27,16)	-12%	-26%

<b>Result of sales of agricultural produce</b>	<b>(0.96)</b>	<b>(4.10)</b>	<b>(1,93)</b>	<b>+77%</b>	<b>-113%</b>

The crop growing segment's cost of sales for the 9 months of 2022 amounted to EUR 17.73 million, 12% less compared to last year. In order to assess the results of each segment more precisely, the transactions between segments are executed based on fixed pricing, thus, starting from 2022 such transactions are presented separately and amounted to a EUR 1 million loss to the crop growing segment in the I-III quarters of 2022.

#### *Agricultural subsidies and gross profit of the crop growing segment*

Total amount of agricultural subsidies accrued in 9 months of 2022 was EUR 7.06 million compared to EUR 6.98 million during the same period in 2021. Accrued subsidies amount is based on calculations according to currently applicable requirements of subsidising programmes regulations.

The gross profit of the crop growing segment, encompassing the results of agricultural produce sales, gain (loss) on changes in fair value of biological assets and agricultural subsidies, has improved in 2022 when compared to last year due to the increased gain on revaluation of biological assets at fair value and improving result of sales of agricultural produce.

Gross profit of crop growing segment, EUR million	9-month of 2022	9-month of 2021	9-month of 2020	Variance 2022/2021, %	Variance 2021/2020, %

<b>Gross profit</b>	<b>11.96</b>	<b>(0.50)</b>	<b>10.13</b>	<b>n/a</b>	<b>n/a</b>

### **2.3. Dairy segment overview**

The result of the dairy segment in the I-III quarters of 2022 has improved compared to the same period last year. Rising production prices had the largest effect. Compared to last year the total sales revenue of the dairy segment grew by 21% and reached EUR 12.32 million.

The average milk yield has decreased due to changes in the structure of feeds. This change was influenced by the poor harvest of legumes (protein forage) of 2020/2021 season due to which the quality of feeds had to be reduced. However, much better yields were reached this season and this will enable the Group to restore the quality of feeds which will in turn increase the milk yield.

In the 9 months of 2022 the average price of milk sold was around EUR 519 per tonne and 26% higher comparing to the same period last year when it was EUR 413 per tonne.

The dairy segment's cost of sales amounted to EUR 11.02 million during the 9 months of 2022 which is EUR 1.15 million more than in the same period last year.

During the 9 months of 2022, a loss of EUR 1.77 million was incurred due to the revaluation of biological assets (animal herd). In comparison, the loss due to the revaluation of biological assets (animal herd) was 40% higher last year.

In the I-III quarters of 2022, the Group has recorded a EUR 1.50 million gross profit increase in the dairy segment when compared to last year.

#### 2.4. Mushroom segment overview

Sales revenues in the mushroom growing segment amounted to EUR 21.17 million in the 9-month period of 2022, and resulted a decrease of 1% compared to the same period last year.

(All amounts are in EUR thousand, unless stated otherwise)

In the 3<sup>rd</sup> quarter energy costs soared and this had a negative impact on the segment's result. The total cost of sales of the mushroom growing segment amounted to EUR 22.68 million in the 9-month period of 2022 and was EUR 1.78 million higher compared to the same period in 2021. Cost of mushrooms mainly has shifted upwards due to growing energy and transportation costs that showed an increase of 72% (EUR 1.8 million) when compared to the corresponding period last year. The average cost of 1 tonne of mushrooms sold increased from 2,283 EUR/tonne to 2,530 EUR/tonne

Sales price was increased in order to compensate the growth of costs. Even though In the 9-month period of 2022, the average non-organic and organic mushrooms sales price per tonne, which was equal to EUR 2,359, has increased only by 1% when compared to the equivalent period in 2021, however, excluding transport and packaging, and only taking into account the price of mushrooms, in the 3<sup>rd</sup> quarter it was 8% higher than in the 1<sup>st</sup> quarter. The ratio of organic mushrooms sold has increased and reached 7.5% during the 3<sup>rd</sup> quarter of 2022. The same ratio last year was equal to 5.8%.

The production volume was not optimal due to saving energy resources and management of production challenges, nonetheless, was higher than in the 3<sup>rd</sup> quarter of 2022.

As a result, the gross result of the segment was negative and for the 9-month period of 2022 amounted to a loss of EUR 1.51 million. During the same period last year, the Group has recorded a gross profit of EUR 0.56 million. Planned investments into production of renewable energy for self-consumption and biomethane production projects that are already being developed by the Group should reduce the dependency on energy costs and enable better control over them.

## 2.5. Fast-moving consumer goods (FMCG) segment

Total sales of the segment amounted to EUR 5.50 million in the 3<sup>rd</sup> quarter of 2022. In the equivalent period last year, sales of the FMCG segment were EUR 0.62 million lower. Even though global events and uncertainty in the market had an effect on the sales of this segment in the first half of the year, positive tendencies can be seen in the 3<sup>rd</sup> quarter as sales in this quarter alone have reached EUR 2.78 million which is 21% higher than in the same period last year. Also, a big part of this year's sales to the biggest and preeminent by its scale market – the USA will be continued in the 4<sup>th</sup> quarter as well.

Cost of sales were EUR 4.49 million compared to EUR 3.41 million last year. Growing costs have also had an effect on the segment's profitability. During the 9-month period of 2022, the FMCG segment's gross profit has decreased to EUR 1.01 million. During the same period in 2021, gross

profit amounted to EUR 1.47 million. Nevertheless, a good tendency can be seen in terms of the segment's profitability as the profit of the 3<sup>rd</sup> quarter accounts to 81% of the segment's profit in 2022.

## 2.6. Operating expenses

The Group's operating expenses during the 9-month of 2022 amounted to EUR 9.25 million compared to EUR 8.22 million in the same period last year. Operating expenses increased mainly due to increased salaries, debt losses and other expenses.

## 2.7. Capital expenditures

Total investments (additions) into property, plant and equipment amounted to EUR 4.01 million in the three quarters of 2022 (EUR 8.97 million in the in the three quarters of 2021). The split of investments (additions) into property, plant and equipment is provided in the table below.

### Investments (additions) into property, plant and equipment, EUR'000

2021 I-III quarters	1,212	469	4,448	601	2,235	<b>8,965</b>

\*excluding additions related with the right-of-use assets.

Despite the fact that investments in fixed assets decreased The Group is continuing the technology projects planned in 2022. In 2022, the Group plans to deliver the first batch of tractors powered by biomethane and electricity, which will start working in the fields in the spring of 2023 already. At the beginning of 2023, work on the infrastructure will be completed and biomethane production will start. The Group is continuing work to develop specialised feed technology to reduce methane emissions from cattle during digestion.

## IV. EXPLANATORY NOTES

### 1. Basis of the preparation

The accompanying interim financial information for the 9-month period ending 30 September 2022, has been prepared in accordance with IAS 34, 'Interim financial reporting'. This financial information should be read in conjunction with the annual financial statements for the year ending 31 December 2021 which have been prepared in accordance with IFRS as adopted by the EU.

The presentation currency is euro (EUR). The financial statements are presented in thousands of euro, unless indicated otherwise. Financial statements for the 9-month period ending 30 September 2022 are not audited. Financial statements for the year ending 31 December 2021 are audited by the external auditor UAB PriceWaterhouseCoopers.

### Critical accounting estimates and assumptions

The preparation of financial information in conformity with IAS 34 requires the use of certain critical accounting estimates. It also requires management to exercise its judgement in the process of applying the Group's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the consolidated financial information, are disclosed below. Critical accounting estimates and assumptions remain the same as disclosed in the audited annual financial statements for period ending 31 December 2021.

### IFRS 16, Leases

Based on IFRS 16, the Group recognised lease liabilities in relation to leases which had previously been classified as 'operating leases' under the principles of IAS 17 Leases. These liabilities were measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate as of 1 January 2019. The weighted average lessee's incremental borrowing rate applied to the lease liabilities as of 31 December 2021 was 6%. The incremental borrowing remained unchanged in 2022.

In applying IFRS 16, the Group has used the following practical expedients permitted by the standard:

- the use of a single discount rate to a portfolio of leases with reasonably similar characteristics;
- reliance on previous assessments on whether leases are onerous;
- the accounting for operating leases with a remaining lease term of less than 12 months as short-term leases (which were recognized as expense on a straight-line basis);
- the exclusion of initial direct costs for the measurement of the right-of-use asset at the date of initial application;
- the use of hindsight in determining the lease term where the contract contains options to extend or terminate the lease.

### Revaluation of biological assets (crops)

The Group estimates the total fair value of crops using following formula and assumptions:

Fair value of the crop = Costs incurred + (Cultivated area in ha \* forecasted average yield as tonnes per ha \* forecasted price per tonne – cultivated area in ha \* forecasted total cost per ha) \* T \* (1 - X), where:

- Cost incurred is cost actually incurred for particular crop during the season till the reporting date.
- Cultivated area in ha is an area of particular crop seeded and expected to be harvested.
- Forecasted average yield tonnes per ha.
- Forecasted price per tonne. Contracted average sales prices are used for fair value estimation adjusted according to the development in the market.
- Forecasted total cost per ha. Average historical cost levels after evaluating the current situation.
- T is a time portion, spanning from the sowing date to the forecasted harvest date.
- X is an adjustment parameter for possible unexpected negative effects to the harvest.

### Revaluation of biological assets (livestock)

Fair value of milking cows is valued by using the discounted cash flow method. The model uses projected revenues from milk sales over the remaining useful life of each animal using a forecasted milk price. Milk price forecast is the average milk price assumption of the following 4 years was. Current cow herd has an estimated working life of 1 to 4 years. At the end of the working period the cow is estimated to be sold for meat. The forecasted revenues are reduced with costs directly related to herd growing (feeds, medicines, employee salaries and other). The free cash-flow is discounted with post tax WACC.

For valuation of other livestock the Group calculates the fair value by taking the average price of meat per kilo. For young bulls and heifers, the value of livestock is determined by using the market values of meat (different for different groups of animals) and multiplying the price of 1 kg by the total weight of specific group of animals.

### Share-based payments

Total cumulative expenses of share-based payments are calculated based on the formula described below. The expenses are accrued in the profit (loss) statement and equity based on the days lapsed since the grant date till the reporting date. Each year the entity will revise the expense to reflect the best available estimate of the number of equity instruments expected to vest.

**AUGA GROUP, AB**

**CONSOLIDATED INTERIM REPORT AND CONSOLIDATED INTERIM FINANCIAL STATEMENTS**  
**FOR 9-MONTH PERIOD ENDING 30 SEPTEMBER 2022**

(All amounts are in EUR thousand, unless stated otherwise)

The total expenses of share-based payments are calculated based on the formula:

$$\text{Share price @ grant date} \times \text{Granted shares} \times (1 - \text{annual staff turnover})^{\text{vesting period}}$$

Where:

The share price of options is based on the closing price at grant date at which the company's shares are traded on the Nasdaq Stock Exchange.

The grant date of the Option is set to be the date of the share-based payment agreement between the Company and the receiver as all the terms and conditions are set in this agreement and there are no other arrangements which would need to be confirmed at a later date.

Granted shares – shares to be granted to employee based on the Option agreement.

Staff turnover – chance that the option will be exercised is adjusted by the forecasted staff turnover percent during the vesting period. The ratio is calculated based on historical staff turnover data of 2 years. The historical staff turnover data includes turnover only of the positions which are set to receive the share-based payments. The turnover of other positions is excluded from the ratio.

There are option agreements which are signed with a special condition – that the receivers do not need to fulfil the service condition, but they will still need to wait 3 years vesting period before being able to exercise the option. Due to this staff turnover adjustment is excluded in the calculation of the expenses of these options as it does not affect their chances to receive the option.
