Quarter 2 2026

Interim report January - June 2026

Financial summary April - June 2026

- » Net sales amounted to TSEK 1,766 (34,095).
- » Operating profit (EBIT) amounted to TSEK -95,031 (-45,906).
- » The result for the period was TSEK -78,762 (-48,450) and earnings (loss) per share before and after dilution were SEK -1.69 (-1.04) SEK.
- » Total cash flow for the period amounted to TSEK -91,353 (62,610).
- » Cash and cash equivalents at the end of the period amounted to TSEK 387,916 (487,254).

Financial summary Jan - June 2026

- » Net sales amounted to TSEK 11,802 (34,095).
- » Operating profit (EBIT) amounted to TSEK -185,885 (-93,425).
- » The result for the period was TSEK -167,529 (-82,122) and earnings (loss) per share before and after dilution were SEK -3.60 (-2.22) SEK.
- » Total cash flow for the period amounted to TSEK -104,065 (20,477).
- » Cash and cash equivalents at the end of the period amounted to TSEK 387,916 (487,254).

General information about the report

The information in this report refers to the Group unless otherwise stated. Comparative figures in brackets refer to the corresponding period of the previous year. Comparative figures in brackets for balance sheet items refer to the end of the previous financial year. This report has not been subject to the auditors review. The report has been prepared in a Swedish and an English version. In the event of any discrepancies between the versions, the Swedish version will take precedence.

Significant events

Significant events during the period April-June 2026

- » Cinclus Pharma announced on June 3 that the last patient had been screened in the Phase III HEEALING1 Study.
- » On April 16, Cinclus Pharma’s annual report for 2025 was published, along with the notice convening the Annual General Meeting to be held on May 21, 2026.

Significant events after the end of the period

- » Cinclus Pharma announced that the enrollment target for the Phase III HEEALING1 study had been achieved. A total of 521 patients were randomized as of July 2, exceeding the protocol-specified target of 501 patients.

HEEALING1 Fully Enrolled – Topline Results Expected in Q4 2026

Enrollment in our first Phase III trial, HEEALING1, is now completed as planned, and we are entering the final step before readout, expected in the fourth quarter of this year. With a robust clinical program and strong prior clinical data, we are well positioned ahead of a milestone that could define the next chapter in Cinclus Pharma’s development.

In early July, the last patient was randomized in HEEALING1, our first pivotal Phase III trial of linaprazan glurate for the treatment of erosive gastroesophageal reflux disease (erosive GERD). The study, which includes a total of 523 patients across eight European countries, aims to demonstrate superior healing and symptom relief compared to the current standard of care, the proton pump inhibitor lansoprazole, in patients with the most severe forms of erosive GERD.

We are very pleased with the execution of the study, which has been entirely in line with our plans since its start last fall. We now look forward with great confidence to presenting topline results later this year, a defining milestone for Cinclus Pharma.

Execution in Focus Ahead of Topline Results

With screening completed and the last patient randomized, our focus now shifts to guiding the study through last patient visit, data cleaning, and database lock with the highest quality. This is an operationally intensive phase, and we have a clear plan to ensure robust and well-controlled execution all the way to readout.

Patients are now undergoing treatment for up to eight weeks and a four week safety follow-up, followed by final visits and data collection. All data will then be quality-assured before the database is locked for analysis. Finally, primary and secondary endpoints will be analyzed according to the pre-specified study protocol, after which topline results will be presented in the fourth quarter of this year.

Strong Support from Prior Clinical Data

The breadth of our clinical database gives us strong confidence ahead of the readout. Linaprazan glurate and its active metabolite linaprazan have been documented in more than 30 Phase I studies and two Phase II studies, involving more than 3,000 participants in total. Data have consistently shown that the compound is well tolerated, has rapid onset of action and, most importantly, demonstrates strong acid control, which is critical for patients with the more severe forms of erosive GERD.

In the Phase II LEED study, the most severely affected patients achieved healing rates of up to 93 percent after four weeks, compared to 38 percent for lansoprazole. Behind that effect lies

a unique level of acid control: in Phase I studies, we have shown that gastric pH can be maintained above 4 for 96 percent of a 24-hour period at the dose now used in Phase III, a level that is essential for healing in the most severely affected patients.

Preparations for HEEALING2 Already Underway

We have initiated preparations for HEEALING2, the second and final Phase III trial before filing for marketing authorization for the erosive GERD indication. Preparations include regulatory submissions, protocol development, and CRO procurement. HEEALING2 will be conducted in both the US and Europe and is planned to start in 2027, when the results from HEEALING1 are available.

Strong Market Interest – Linaprazan Glurate Stands Out

We see clear and growing interest in linaprazan glurate globally, and in the US in particular. Our thesis is not only that the class of PCABs, potassium-competitive acid blockers, is strong, but that linaprazan glurate offers an especially compelling profile within the class. With superior acid control compared to both proton pump inhibitors and the PCABs already on the market, we see linaprazan glurate as the next-generation treatment for erosive GERD.

Together with our commercial partner Zentiva, we also see strong potential for linaprazan glurate to become the first PCAB launched in the European market, a market whose size should not be underestimated. As a point of comparison, vonoprazan, the first PCAB to be launched in Japan, reached nearly USD 1 billion in annual sales in a market with one quarter of Europe’s population and comparable pricing levels.

Globally, an estimated 20 million people seek care for severe erosive reflux disease, of which approximately 10 million are in the US and Europe. These are patients who often suffer from highly painful symptoms, impaired quality of life, and sleep disturbances, and who face a risk of progression to more serious conditions such as cancer, yet today lack a sufficiently effective treatment option.

Focus for the Remainder of 2026

Our single most important focus is to deliver HEEALING1 with high quality and present topline data in the fourth quarter. In parallel, we continue to prepare HEEALING2, advance regulatory work in the US and Europe, and position the company for registration and commercialization. In short: clinical execution, regulatory progress, and preparation for the next pivotal step.

We are determined to take that next step: to offer patients with severe erosive GERD a treatment that truly makes a difference.

Christer Ahlberg,
President and CEO

A model of Linaprazan Glurate C21H26N4O2

19 million patients worldwide seek medical care for severe erosive reflux disease

Reflux disease affects people worldwide and is a growing health problem. The most common treatment today is proton pump inhibitors (PPIs), but their effect is often insufficient – especially in patients with more severe symptoms and erosive damage. An alternative treatment option, potassium-competitive acid blockers (PCABs), is now gaining ground in several countries.

The key is to control stomach acid

In reflux disease, stomach acid repeatedly flows back into the esophagus, causing irritation, inflammation, and in severe cases erosive damage to the lining. The primary goal of drug treatment is therefore to control stomach acid – that is, to keep gastric pH high for most of the day so the acid does not damage the tissue.

Today’s standard treatment is not sufficient

Proton pump inhibitors (PPIs) have long been the most common medical treatment for reflux disease. These drugs block the activity of the proton pump in the acid-producing cells of the stomach, thereby reducing acid production.

PPI treatment often provides symptom relief and improvement for many patients. However, in some cases acid control is not sufficient throughout the entire day, which can result in incomplete healing of the esophageal lining and a slower therapeutic effect.

Linaprazan shows strong and sustained acid control

In recent years, a new class of drugs – potassium-competitive acid blockers (PCABs) – has been introduced in several markets. PCABs have a different mechanism of action than PPIs and can provide faster and more stable suppression of acid production. First-generation PCABs are now beginning to replace standard treatment in these markets.

Cinclus Pharma’s drug candidate linaprazan glurate is in late-stage clinical development and represents the next generation of PCAB therapy. Previous clinical studies show that linaprazan glurate is more effective than first-generation PCABs, providing strong and long-lasting acid control. This level of control is critical for effective treatment of reflux disease and also supports significant commercial potential.

130 million in people in the United States and Europe live with some form of reflux disease

19 million patients worldwide seek medical care for severe erosive reflux disease

The number of patients is estimated at 10 million in the United States and Europe

The commercial strategy combines partnerships, patent protection, and growth

Cinclus Pharma’s commercial strategy is built on a clear unmet medical need and a large global market. Through clinical development, strong intellectual property protection, and strategic partnerships, the company is creating the foundation for long-term value and new treatment options for patients with severe erosive reflux disease.

A partner-based path to market

In the second quarter of 2025, Cinclus Pharma entered into a strategic collaboration and licensing agreement with Zentiva, a leading European pharmaceutical company. The agreement covers the commercialization of linaprazan glurate across the EEA, including the United Kingdom and Switzerland. The total deal value amounts to up to EUR 220 million and includes upfront payments, regulatory and commercial milestone payments, as well as royalties of approximately 20 percent on future sales.

In Asia, Cinclus Pharma has previously licensed the rights to linaprazan glurate to Jiangsu Sinorda Biomedicine Co. Ltd for development and commercialization in China and other selected regions. In December 2025, linaprazan glurate was included on China’s National Reimbursement Drug List for the treatment of gastroesophageal reflux disease. This was followed by a product launch on the Chinese market in early 2026.

For other markets, including the United States, Cinclus Pharma continues to evaluate the most value-creating route to market.

Strong patent protection and data exclusivity

Strong intellectual property protection is a core element of Cinclus Pharma’s commercial strategy. Linaprazan glurate is protected by multiple patents, including a polymorph patent in the United States valid until 2042 and a formulation patent in Europe valid until 2040.

In addition to patent protection, Cinclus Pharma also relies on regulatory data exclusivity, which provides effective protection against generic competition following potential market approval. In Europe, this provides up to 10–11 years of data exclusivity from the date of approval, while the corresponding protection in the United States is five years. In addition, the company may be eligible for a further five years of exclusivity in the United States if linaprazan glurate is approved for the treatment of *H. pylori* as the first indication.

Focus on long-term value creation

The combination of strong intellectual property protection, established partnerships, and a flexible market strategy provides Cinclus Pharma with a solid foundation for the next steps. With a clear focus on quality, long-term value, and collaboration, the company continues to advance linaprazan glurate toward market and toward patients in need of improved treatment options.

H. pylori indication expands the potential use of linaprazan glurate

Cinclus Pharma is primarily developing linaprazan glurate for the treatment of severe erosive reflux disease. In parallel, the company is also evaluating the potential use of linaprazan glurate as part of the treatment of *Helicobacter pylori* infection.

H. pylori is a bacterium that infects the stomach and is a common cause of peptic ulcers and chronic gastritis. The World Health Organization (WHO) classifies *H. pylori* as a cancer-causing bacterium, and infection should therefore be treated. Current treatment typically consists of a combination of acid-suppressing medication and antibiotics.

Linaprazan glurate has the potential to provide stable and long-lasting acid control, which may improve treatment outcomes for *H. pylori* infection. Cinclus Pharma has also received regulatory waivers from pediatric studies for this indication, simplifying future development.

Approval for an *H. pylori* indication could, over time, expand the clinical use of linaprazan glurate and support additional regulatory data exclusivity.

Linaprazan glurate is in late-stage clinical development

In 2025, linaprazan glurate entered Phase III, marking an important milestone in its clinical development. The program is based on a comprehensive clinical data package from earlier studies demonstrating both effective acid control and high healing rates.

Phase I: Effective acid control

Across multiple Phase I studies, linaprazan glurate has demonstrated dose-dependent and sustained acid control. Gastric pH, used as a biomarker, provides an early and reliable indication of future clinical efficacy. For patients with severe erosive reflux disease, where esophageal damage is caused by prolonged exposure to gastric acid, effective acid suppression is critical to enable healing.

The relationship between gastric pH and healing is well established. When gastric pH is maintained above 4 for most of the day, conditions for esophageal healing improve significantly. In one of Cinclus Pharma’s Phase I studies, linaprazan glurate maintained gastric pH above 4 for 96% of the day at the dose now used in the Phase III program. This level of acid control is unusually high and unique compared to currently approved therapies worldwide, making linaprazan glurate particularly promising for patients with erosive reflux disease.

Phase 2: Rapid healing

In the company’s Phase II study, a healing rate of 93% was achieved in patients with severe erosive reflux disease in the optimal dose group. In comparison, the healing rate for the reference proton pump inhibitor (PPI) was 38%. These results demonstrate a rapid and robust treatment effect, even in the most difficult-to-treat patient populations, and provide strong support for continued clinical development.

Phase 3: Confirm efficacy at scale

In the Phase III program, linaprazan glurate is being evaluated in large, comparative studies against the current standard of care for erosive reflux disease. The objective is to confirm that the strong acid control and rapid, effective healing observed in earlier studies can also be demonstrated in a broader patient population and in a manner that meets regulatory requirements.

¹⁾ For the Chinese market

The share

Cinclus Pharma’s share (CINPHA) has been listed on Nasdaq Stockholm since June 20, 2024.

The opening price April 1 2026 was SEK 16.80 per share. The closing price on the last trading day in June was SEK 11.00 per share.

The average volume-weighted share price during the second quarter was SEK 12.82 per share. The average volume-weighted share price during the period January to June was SEK 13.63 per share.

The market capitalization on the last trading day in June was MSEK 521.

The company had 47,392,219 outstanding shares of which 46,537,789 are ordinary shares and 854,430 are C shares which give the right to 1/10 vote of an ordinary share. The C-shares are held by Cinclus Pharma Holding (publ).

At the end of the second quarter, the company had approximately 4,000 shareholders.

*Transaction costs are excluded from operating expenses, 18.5 MSEK.

Net sales

Net sales amounted to TSEK 1,766 (34,095) during the quarter and to TSEK 11,802 (34,095) during the interim period. The revenue consists partly of licensing revenue from the partnership with Zentiva for commercialization of linaprazan glurate in Europe, and partly from Sinorda in China. The changes in quarter and interim period is due to a larger portion of the revenue being accrued upon signing the agreement in Q2, 2025.

Operating expenses

Research and development expenses

Research and development (R&D) expenses during the quarter amounted to TSEK -85,689 (-53,739), which correspond to an increase of TSEK 31,950 or 59 %. For the interim period the R&D expenses amounted to TSEK -176,962 (-92,176), which correspond to a change of 84,786 or 92%. The research and development expenses related mainly to the ongoing Phase III study, where patients are recruited and screened while the corresponding period last year consisted of expenses for the start up of the Phase III program.

Administrative expenses

The administrative expenses amounted to TSEK -10,650 (-27,206) for the quarter, which correspond to a decrease of TSEK 16,556 or 61 %. For the interim period the administrative expenses amounted to TSEK -20,082 (-35,018) a decrease of TSEK 14,936 or 43 %. The decreased expenses are largely due to transaction expenses related to the Zentiva deal in the corresponding period last year.

Other operating income and expenses

Other operating income and expenses amounted to net TSEK -458 (944) during the quarter, corresponding to a change of TSEK 1,402. For the interim period other operating expenses amounted to TSEK -643 (-326), corresponding to a change of TSEK 317. Other operating income and expenses consist of realized and unrealized exchange rate effects on operating receivables and liabilities.

Operating income/loss (EBIT)

The Group’s operating income/loss for the quarter amounted to TSEK -95,031 (-45,906), corresponding to a change of TSEK 49,126. For the interim period other operating expenses amounted to TSEK -185,885 (-93,425), corresponding to a change of TSEK 92,461.

Financial items

Financial income and expenses (net financial income/expense) amounted to TSEK 16,269 (-2,424) during the quarter, corresponding to a change of TSEK 18,126. For the interim period the net financial income/expense amounted to TSEK 18,357 (11,496), corresponding to a change of TSEK 6,861. The financial income for the interim period attributed mainly to revaluation of the convertible loan and interest income on bank funds while financial expenses attributed to interest payments on the convertible loan communicated in March.

Income tax

The Group recognized a tax expense of TSEK 0 (-120) during the quarter. For the interim period the tax expense amounted to TSEK -1 (-193). The tax consisted of Swiss federal and cantonal tax.

Net income/loss

The Group reported net income/loss after tax of TSEK -78,762 (-48,450) for the quarter. This corresponded to a change of TSEK 30,432. For the interim period the net income/loss after tax amounted to TSEK -167,529 (-82,122), a change corresponding to TSEK 85,600.

Equity and indebtedness

Equity in the Group as of June 30, 2026 amounted to TSEK 202,696 compared to TSEK 369,391 at the end of previous year, a decrease of TSEK 166,695.

Non-current liabilities at the end of the period amounted to TSEK 40,826 (40,373). The non-current liabilities consisted mainly of non-current contractual liabilities, attributed to the out-licensing of the commercial rights to Zentiva in the second quarter of 2025.

Current liabilities in the Group at the end of the period amounted to TSEK 181,017 (136,792), an increase of TSEK 44,226. The increase attributed mainly to current interest bearing liabilities of TSEK 48,310 (0) as well as convertibles and warrants of TSEK 15,785 (0) arising from the first tranche of the convertible loan arrangement. Furthermore, current liabilities consisted of trade payables of TSEK 41,401 (48,464), lease liabilities of TSEK 3,239 (3,111), other liabilities of TSEK 2,656 (9,656), contract liabilities of TSEK 48,933 (54,527) and accrued expenses of TSEK 20,693 (20,827).

Liquid funds and cash flow

Cash and cash equivalents at the end of the period amounted to TSEK 387,916 (487,254), a decrease of TSEK 99,338 compared to the end of 2025. During the period, the company received the first drawn down of the convertible loan of approximately MSEK 86 before transaction costs.

Cash flow from operating activities before change in working capital amounted TSEK -95,679 (-42,378) for the quarter and TSEK -184,632 (-88,455) for the interim period.

Cash flow from operating activities including change in working capital amounted to TSEK -86,193 (63,941) for the quarter and TSEK -181,834 (22,148) for the interim period).

Cash flow from investing activities amounted to TSEK 0 (-295) for the quarter and TSEK -24 (-295) for the interim period attributed to purchase of equipment compared to deposit for rental premises.

Cash flow from financing activities amounted to TSEK -5,161 (-1,036) for the quarter and TSEK 77,793 (-1,376) for the interim period attributed to amortization of lease liabilities and convertible loan received.

The total cash flow for the quarter amounted to TSEK -91,353 (62,610). and TSEK -104,065 (20,477) for the interim period.

Financing

Following the settlement of the convertible loan in the interim period, the Company estimates as of June 30, 2026 that the current working capital is sufficient to the third quarter of 2027, after the read out of the first Phase III program. Read out is assessed per the date of this report, following the current development plan to take place during the fourth quarter of 2026.

Parent company

Cinclus Pharma Holding AB (publ), reg.no. 559136–8765, is the parent company of the Group. The business consists of work with pre-clinical and clinical development, marketing, administrative and corporate management functions. The parent company has two wholly owned subsidiaries, one in Switzerland and one in Sweden, which together form the Group.

The total revenues of the parent company amounted to TSEK 1,831 (40,892) for the quarter and TSEK 12,023 (40,936) for the interim period consisting of revenues from Zentiva and Sinorda.

Operating income/loss for the quarter amounted to TSEK -95,042 (-45,436) and TSEK -185,836 (-91,708) for the interim period.

Net financial income/expense for the quarter amounted to TSEK 16,439 (-3,232) and TSEK 19,079 (9,495) for the interim period. The positive net financial income is mainly attributed to the revaluation of convertible loan and interest income on bank funds.

Income/loss for the quarter amounted to TSEK -78,603 (-48,669). and TSEK -166,757 (-82,213) for the interim period.

With the transfer of patents and IP rights to the parent company from the Swiss subsidiary as of January 1, 2022, the parent company recognizes an intangible asset of TSEK 320,463 (320,463).

Cash and cash equivalents at the end of the period amounted to TSEK 380,116 compared to TSEK 480,535 at the end of previous year, a decrease of TSEK -100,420.

Total Equity in the parent company as of June 30, 2026 amounted to TSEK 515,669 compared to TSEK 681,859 at the end of previous year, corresponding to a decrease of TSEK 166,190. Share capital amounted to TSEK 920 (920). The company had on the balance sheet day, June 30, 2026, 46,537,789 ordinary shares and 854,430 C-shares.

Non-Current liabilities in the parent company amounted to TSEK 37,700 (35,587) in the end of the period, attributed to contract liabilities deriving from the Zentiva deal in May 2025.

Current liabilities in the parent company amounted to TSEK 179,857 (125,373) in the end of the period, an increase of TSEK 54,485 mainly due to the convertible loan.

Other information

Personnel

At the end of the quarter, the number of employees was 17, compared to 20 in the same period previous year. The average number of employees during the quarter was 11, compared to 16 in the same period last year. All employees are employed by the parent company. In addition, the company had 29 consultants attached to the company, at the end of the quarter.

Risks

As the company is dependent on additional financing to continue the development of linaprazan glurate in the long term, the refinancing risk is described below. For other risks, reference is made to the description of the Group’s significant financial and business risks in the Directors’ Report and Note 19 in the Annual report for 2025.

Refinancing risk

Refinancing risk refers to the risk that cash and cash equivalents are not available and that financing can only be obtained partially or not at all, or at an increased cost. The Group is currently financed with equity and loan and the refinancing risk has been significantly reduced in view of the new share issue that took place in connection with the listing of the company’s share on Nasdaq Stockholm on June 20, 2024, the out-licensing of the European commercial rights to Zentiva and the settlement of the convertible loan this quarter. In the longer term, the Group is in need of more extensive financing to be able to conduct and implement a second Phase III study and registration of the erosive GERD indication.

Notes to the financial information

Note 1 General information

Cinclus Pharma Holding AB (publ), (hereafter Cinclus Pharma) corporate registration number 559136–8765 is a limited company registered in Sweden with its registered office in Stockholm. The address of the head office is Kungsbron 1, 111 22 Stockholm, Sweden. The company is listed on Nasdaq Stockholm since June 20, 2024 and the object of the company’s operations is to develop and commercialize pharmaceuticals. Cinclus Pharma Holding AB (publ) is the parent company in the Group Cinclus Pharma, which consists of the parent company and its two subsidiaries (hereafter the Group). Unless otherwise specifically stated, all amounts are reported in thousands of kronor (TSEK). All amounts are, unless otherwise stated, rounded to the nearest thousand. Figures in parentheses refer to the comparison period.

Except for Debt to credit institutions, the Group’s financial assets and liabilities that are recognized at amortized cost are deemed to be a reasonable estimate of the fair value. They refer essentially to short-term receivables and liabilities, whereby the discounting effect is immaterial.

Note 2 Accounting principles

The most important accounting principles applied when these consolidated accounts have been prepared are stated below. These principles have been applied consistently for all periods presented, unless otherwise stated. The consolidated financial statements have been prepared in accordance with the Annual Accounts Act (1995:1554), RFR 1 Supplementary accounting rules for groups, and the International Financial Reporting Standards (IFRS) and interpretations from IFRS Interpretations Committee (IFRS IC) as established by the European Union. This interim report has been prepared in accordance with IAS 34 Interim Financial Reporting and the Annual Accounts Act. The parent company interim report has been prepared in accordance with the Annual Accounts Act and Swedish Corporate Reporting Board recommendation RFR 2.

Applied accounting principles and explanations for these can be found and are consistent with those described in the 2025 annual report. The accounting principles have been extended to also include the accounting and valuation of the Group’s convertible loan.

Classification and valuation of financial liabilities

The Group’s financial liabilities are classified as amortised cost with the exception of derivative instruments, see below. Financial liabilities recognized at amortized cost are initially measured at fair value, net of transaction costs. After the first accounting session,

they are valued at amortised cost using the effective interest method.

Convertible Debentures

The convertible debentures issued can be converted into company shares by the counterparty exercising the option to convert the debt into shares. The conversion right is regulated by an exchange of a fixed number of shares for a fixed amount in EUR, i.e. a currency other than the functional currency. The conversion right therefore does not meet the criteria for classification as equity but is reported as a derivative instrument. The conversion option have equity-like characteristics and is thus not closely related to the debt.

The convertible debentures are reported as a composite financial instrument, divided into a debt component and a derivative component (embedded derivative). At the time of initial recognition, the segregated derivative is measured at fair value, and the remaining amount received is allocated to the liability component. In the subsequent accounting, the debt component is valued at amortised cost using the effective interest method. At the time of initial accounting and at subsequent accounting, the derivative component is measured at fair value through profit or loss through the application of generally accepted valuation methods. The liabilities component and the derivatives component are recognised on the balance sheet as current liabilities, as the counterparty has the right to convert at any time during the maturity. Changes in the fair value of the derivative component are recognised in the income statement in net financial items.

Derivatives

Derivatives are initially reported at fair value at the time of entry and are subsequently revalued at fair value at each reporting date. The resulting profit or loss is immediately recognized in the income statement. A derivative with positive fair value is recognized as a financial asset, while a derivative with negative fair value is recognized as a financial liability. Derivatives are not net recognized in financial statements unless the Group has both a legally binding right and intention to net reduce. A derivative is presented as a long-term asset or a long-term liability if the remaining maturity of the instrument is longer than 12 months and it does not mature or be settled within 12 months. Other derivatives are presented as short-term.

Embedded derivatives

An embedded derivative is a component of a composite instrument that also includes a non-derivative hosting contract and has the effect of varying some of the cash flows of the composite instrument in a similar manner to that of a stand-alone derivative.

Derivatives embedded in composite instruments where the host contract is not a financial asset within the scope of IFRS 9 (e.g. financial liabilities) are separated from the host contract in cases where the derivative meets the definition of a derivative, its risks and nature are not closely related to the risks and nature of the host contract, and the composite instrument as a whole is not measured at fair value through profit or loss.

Warrants

The warrants issued in connection with the issuance of the convertible loan are settled through an exchange of a fixed number of shares for a fixed amount in EUR, i.e. a currency other than the functional currency. The warrants therefore do not meet the criteria for classification as equity but are reported as derivative instruments.

Judgements and estimates

To prepare reports in accordance with IFRS requires the use of some important estimates for accounting purposes. Furthermore, management is required to make certain judgments when applying the Group’s accounting principles. The areas that include a high degree of assessment that are complex or such areas where assumptions and estimates are of significant importance for the consolidated accounts, have been reported in the Group’s annual report for 2025.

Going concern principle

This interim report has been prepared with the assumption that the company has the ability to continue as a going concern for the next 12 months in line with the going concern principle.

See further sections on financing, risks and risk management and note 3.

Note 3 Risks and risk management

Cinclus Pharma’s operations, results and position are affected by a number of risk factors that are described in detail in the company’s prospectus prepared in connection with the listing of the company’s share on Nasdaq Stockholm on June 20, 2024 but also in the annual report for 2025.

The risks and associated risk management considered in the preparation of this interim report apply to all periods and are consistent with what is presented in the risk factors section in the annual report for 2025.

With the new share issue in connection with the listing of the company’s shares on Nasdaq Stockholm, the partnership with Zentiva

and the convertible loan the refinancing risk has been reduced. Refinancing risk refers to the risk that liquid funds are not available, and that financing can only be obtained partially or not at all, alternatively at an increased cost. The Group is currently financed with equity. In the longer term, the Group is in need of more extensive financing. It can not therefore be ruled out that the Group will be exposed to risks related to for example external loan financing.

Note 4 Net sales

Net sales are based on the license agreement with Zentiva k.s., an European pharmaceutical company, regarding the commercial rights of linaprazan glurate in Europe.

The agreement with Zentiva includes an upfront payment, regulatory and commercial milestone payments, sales milestones and royalties on Zentiva’s future product sales revenue of linaprazan glurate.

For the interim period, the net sales relates to parts of the upfront payment Cinclus Pharma received upon signing of the agreement with Zentiva. The upfront payment has been allocated over the estimated period of time that the Phase III program runs.

Net sales are also based on the agreement between Cinclus Pharma and its Chinese partner Sinorda Biomedicine Co. Ltd. The income refers to license related revenues that Sinorda Biomedicine has received from out-licensing to its partner in China, HuaDong Medicine Co. Ltd.

Note 5 Incentive programs

The summary table below shows the current programs as of the balance sheet date:

Option programs

Program	Opening balance Jan 2026	Allocated options	Expired options	Closing balance Jun 2026	Terms	Corresponding number of shares	Exercise price/ option (SEK) *
QESO 2022	4,450	–	–	4,450	1:80	356,000	47.33

At an extraordinary general meeting on June 3, 2024, two new long-term incentive programs were adopted (one employee stock option program, PO 2024/2027 series 1, and a performance share program). New articles of associations were also adopted at the extraordinary general meeting, pursuant to which the company may issue class C shares in order to secure delivery of shares to the participants in the programs and to secure payment of future social security contributions. In December 2024, 854,430 C shares were issued, which the company repurchased and holds in its own custody. The performance share program for employees and the employee stock option program for the CEO and a scientific advisor have been granted and started to be expensed in quarter three, 2024, see adjacent tables.

The performance share program runs for just over three years and participants must retain their employment and invested shares throughout the vesting period in order to receive an allocation of new shares. The number of shares allocated depends on the share price performance and the employment status at the end of the vesting period. As regards the development of the share price, a comparison is made at the end of the vesting period between the initial share price, i.e. the IPO price of SEK 42 per share, and the price at the end of the vesting period. A range between 20% and 60% in share price development results in linearly different allocations of shares. A maximum of 360,150 shares can be allocated to participants in the program.

The performance share program generates personnel costs, in accordance with IFRS2 and is initially estimated at approximately SEK 6.8 million and social costs estimated at SEK 6.2 million according to certain assumptions, see also the company’s listing prospectus from June 2024.The employee stock option program, PO 2024/2027 series 1, also generates personnel costs in accordance with IFRS2 of approximately SEK 1.5 million and social costs of SEK 1.4 million.

At the ordinary general meeting on May 21, 2026, a new long-term incentive performance share program was adopted. The performance share program runs for around three years and participants must retain their employment and invested shares throughout the vesting period in order to receive an allocation of new shares. The number of shares allocated depends on the share price performance and the employment status at the end of the vesting period. At the end of the vesting period, the share price performance will be assessed by comparing the average share price for March 2029 with the average share price for March 2026. A range between 20% and 60% in share price development results in linearly different allocations of shares. A maximum of 762,250 shares can be allocated to participants in the program.

The performance share program generates personnel costs, in accordance with IFRS2 and is initially estimated at approximately SEK 4.6 million and social costs estimated at SEK 4.8 million according to certain assumptions.

The total dilution effect of the incentive programs, assuming maximum vesting/allocation, amounts to 3.04%.

Note 6 Related party transactions

Transactions with related parties take place on market terms. The table below shows purchases in the Group’s parent company and subsidiaries. For further information about transactions with related parties, see annual report 2025.

Note 8 Convertible loan

Convertible loan

During Q1, 2026, the company entered into a financing agreement and under the financing agreement issued a convertible loan with associated standalone warrants. The loan is EUR 8 million and can be converted at any time during the term. If the loan is not converted, it falls due for payment by amortization in 2029. The contractual coupon rate of 12% shall be paid on an ongoing basis. At the same time, 636,341 warrants were issued.

The loan is accounted for in accordance with its substance, divided into a debt and a conversion option. In addition, the warrants are reported as an integral part of the loan in that the market value of the warrants at the time of issue is considered to be part of the interest rate. The effective interest rate on the loan is therefore 37% compared to the coupon rate of 12% and is presented in net financial items.

The loan's conversion option and the warrants are both classified as derivatives, issued call options, and are measured at fair value via the income statement with changes in value presented in net financial items.

The valuation is attributed to level 2 in IFRS 13 and is made in Black Scholes with rolling 12-month historical volatility, risk-free interest on each remaining maturity and an exercise price of EUR 1.59 for the conversion option and EUR 1.67 for the warrant. At the start of the agreement, the conversion options would, with an increase in the share price of 10%, lead to a valuation loss of SEK 4.5 million and an increase in volatility of ten percentage points would lead to a valuation loss of SEK 4.2 million. For the warrants, an effect of SEK 0.9 million and SEK 0.7 million respectively would occur in the same scenario.

The convertible loan can be converted into shares or repaid to the counterparty. Any repayment will not be made until 2029. When classified in the balance sheet, the loan needs to be seen together with the option to convert, and since adjustment (conversion) can take place at any time during the term, convertible loans as well as derivatives are classified as current liabilities. As of June 30, 2026, the convertible loan amounts to SEK 48,310 thousand and derivatives regarding conversion options and warrants respectively to SEK 15,785 thousand.

Cinclus Pharma Holding AB has provided collateral for the convertible loan in the form of a primary pledge in all material assets of the Company and its subsidiaries as well as a corporate mortgage of EUR 8 million. There are no financial covenants.

Definitions of key figures and definitions and reconciliation of alternative performance measures

In the report, the company presents key figures in accordance with the IFRS regulations. The company also presents so called alternative key figures, i.e. measures that are not defined according to IFRS. The alternative key figures found in the report are, among other things, costs related to research and development as a percentage of total operating costs, equity ratio % and quick ratio %. The company considers the former to be an important complement because it enables a better evaluation of the company's financial trends. This financial performance measure should not be viewed in isolation or considered to replace the performance indicators that have been prepared in accordance with IFRS.

Furthermore, the alternative performance measure the company has defined should not be compared with other performance measures with a similar name used by other companies. This because the above-mentioned performance measure is not always defined similarly and other companies may calculate it differently than Cinclus Pharma, see adjacent table for further definitions and reconciliation of KPIs and alternative KPIs.

Alternative performance measures

Reconciliation of alternative performance measures	Quarter 2		Quarter 1-2		Year

Definitions of key figures and alternative key figures

Key figures according to IFRS	Definitions	
Earnings per share for the period before and after dilution	Profit for the period divided by the average number of shares during the period before and after dilution. Earnings per share after dilution is calculated by adjusting the weighted average number of ordinary shares outstanding for an estimated conversion of all potential ordinary shares giving rise to a dilutive effect, which is in accordance with IAS 33 Earnings per share.	
Alternative key figures	Definitions	Reasons for using the key figures
Operating profit / loss (EBIT)	Profit before financial items and tax. The information is taken from the Statement of income.	The key figure helps the reader understand the profitability of the operating business.
Operating expenses	The sum of research and development expenses and administration expenses for the period. The information is taken from the Statement of income.	The key figure helps the reader understand the costs of the operational business.
Research and development expenses / Operating expenses % *	Research and development expenses, divided by operating expenses, which consists of research and development expenses and administrative expenses.	The key figure helps the reader understand the proportion of costs attributable to the group's core operations, research and development.
Equity ratio, % *	The equity ratio at the end of each period is calculated by dividing total equity attributable to the parent company's shareholders by total assets.	The equity ratio measures the proportion of the total assets that is financed by the shareholders.
Quick ratio, % *	Current assets in relation to current liabilities.	The key figure shows the group's short-term ability to pay.
Number of shares on the balance sheet date	Number of shares in the company at the end of the period.	The key figure gives the reader an understanding of the number of shares at the end of the period.
Equity per ordinary share *	Equity divided by number of shares at the end of the period	The key figure gives the reader a possibility to compare book value with market value
Cash flow for the period per ordinary share *	Cash flow for the period divided by average number of shares	The key figure shows the net cash generated or used on a per-share basis

* Reconciliation of these key figures can be found on the previous page.

Certification by the board of directors and the CEO

The board of directors certifies that this interim report gives a true and fair view of the group’s operations, financial position and results. For a description of the risks faced by the Cinclus Pharma Group, which are deemed to be unchanged, please refer to the Group’s latest annual report.
