

PRESS RELEASE: Qflow welcomes Ecofact to the Group and strengthens its offering in sustainable community development

Qflow welcomes Ecofact as an important part of the Qflow Group. Together, we are strengthening our offering in sustainable community development, with a particular focus on nature, the environment, and biodiversity. Ecofact's leading expertise in ecological assessments, environmental advisory services, and sustainability matters helps meet the growing demand for qualified decision-making input and expert support in complex community development and infrastructure projects. The acquisition also strengthens Qflow's position in the Norwegian market and creates an even stronger platform for continued growth in Norway and across the Nordics.

It feels fantastic to welcome Ecofact to Qflow. Their specialist expertise in ecology, the environment, and biodiversity is unique and strongly complements our existing offering. At the same time, we are strengthening our position in Norway and gaining the opportunity to create even greater value for our customers together. We look forward to developing the Group together with Ecofact's employees and management.

— Emile Hamon, Deputy CEO, Qflow

Ecofact is a Norwegian specialist consultancy within nature, environmental, and water-related matters, with offices in Sandnes and Moss and operations throughout Norway. The company offers services including impact assessments, nature mapping, natural resource management, water and marine environments, and advisory services related to biodiversity and environmental requirements in infrastructure, energy, and community development projects. With approximately 20 employees and broad specialist expertise in ecology, nature management, and environmental analysis, Ecofact is a well-established partner for both public and private clients.

After 20 years as an independent company, we are proud and pleased to become part of a larger community. Together with leading specialist consultancy companies from several European countries, we have the opportunity to further develop our expertise in nature, the environment, and sustainability. We look forward to contributing our experience while also learning from other strong expert environments across national borders. We are convinced that this creates new opportunities to make an even greater contribution to both nature and society, and we look forward with great enthusiasm to the next chapter in Ecofact's development.

— Roy Mangersnes, Founder and Sales Manager, Ecofact

About Qflow

Qflow Group brings together the best consultants in community development, and together we create a smarter and more sustainable society — innovation and collaboration for the future.

Today, Qflow consists of 38 companies within the Group, with approximately 1,250 consultants and revenue of approximately SEK 2,250 million. Qflow is a leading player in the consulting market within community development and brings together leading specialists in the sector.

Our network includes some of the best consultants for creating better flow in the construction and infrastructure industry. We do this by working with smarter project management and technical solutions. Together, the Qflow Group helps connect a fragmented value chain and identify synergies between entrepreneurs that can promote innovation and development.
