## Truecaller Launches AI-Enabled Call Recording in India

Truecaller, the leading global platform for verifying contacts and blocking unwanted communications, announces the launch of AI-Powered Call Recording in India, for iOS and Android platforms. The new addition provides users with the ability to record incoming and outgoing calls directly within the Truecaller app, offering a convenient and efficient way to capture and manage important conversations. AI Call Recording is a paid feature: available with a Truecaller Premium subscription, and is an advanced cloud-based recording that offers high level of voice clarity. A user can record and transcribe all calls, in English and Hindi from any caller. The service has previously been launched in English speaking countries like the US, and additional markets and languages will follow.

By leveraging cutting-edge Artificial Intelligence technology, Truecaller empowers users to fully engage in their live conversation without the need to be concerned about taking detailed notes, thereby improving productivity during calls. The integration of AI into the newly launched call recording feature marks a significant leap forward, allowing for a detailed transcription of the entire phone call, along with an AI-generated call summary.

Speaking about the launch of the call recording feature in India, Rishit Jhunjunwala, Managing Director of Truecaller India and Chief Product Officer of Truecaller stated, "We are constantly innovating cutting-edge solutions that enhance communication. As we continue to push these boundaries, we are thrilled to announce our AI-enabled Call Recording solution, which has been a highly requested user feature by our 266M active users in India. We want to give our customers greater control and flexibility in managing their conversations, and it is also a very valuable tool for both personal and professional purposes."

Truecaller's AI powered Call Recording solution will be available as a part of Truecaller's Premium plan. While the feature is being rolled out across iOS and Android, it currently supports transcriptions in English and Hindi.
